

Upgraded Demo

Parsun 48v Tiller outboard

Demo, (lightly used for hull speed testing) 48v short shaft tiller steer outboard with a powerful Brushless DC MARS motor and water cooled controller. This motor has been upgraded to the latest 5hp controller for more power. Additionally the propellor has been swapped out with a slightly larger and steeper pitch model, and the gearcase has been tweaked for better water flow. New \$2,600+

\$1,900

well used Minnkota e-drives

I seem to have an ever expanding collection of take-off minnkota e-dve 48v motors. Some work fully, some have issues that can be worked around. Great for a wind generator, cheap eboat motor, boat anchor, you get the idea. No really, they could be used for a project boat or use 2 for twin power! You can use the built in controller or bypass and run direct. Permanent magnet brushed motors. New these were \$2,800, but these are not new. Make an offer.

\$500 and up

Batteries, Chargers, etc...

Sometimes I buy more than I need. Sometimes I change my mind. Sometimes a customer changes their mind. For whatever reason I end up with new and used chargers, AGM batteries, Wet Cell batteries, battery cable, solar panels for 48v boats, circuit breakers, shorepower cords, adapters, etc.. If you are building an eboat and need something why not give a call, no harm in asking what treasures the storeroom holds.
